LETTER OF TRANSMITTAL

His Excellency Gov. J. Melville Broughton Raleigh. North Carolina

Sir:

I have the honor to transmit herewith the report of the superintendent of operations of the North Carolina Santorium and the Western North Carolina Santorium for the treatment of tuberculosis for the biennium closing June 30, 1942, together with report on the construction and equipment of the Eastern North Carolina Sanatorium located at Wilson, North Carolina.

The Eastern North Carolina Santorium has been practically completed, equipped and staffed and we expect to begin the admission of patients during the month of November. This Sanatorium, although not as large as is urgently needed, will be of tremendous benefit in dealing with the problem of tuberculosis in the eastern part of our state.

We are happy to call attention to the fact that there has been a further reduction in the death rate from tuberculosis in North Carolina during the past biennium. However, the conditions of warfare will probably result in an increase in the number of sufferers from tuberculosis in this state and therefore a need for increased facilities for the prevention and cure of this disease. Because of army and navy needs, we have had to face a shortage of trained doctors and therefore will be unable to conduct tuberculosis clinics in the various counties of the state during the present emergency. A closer coöperation among county health officers in the early diagnosis will tend temporarily to relieve this problem. We must expect in the immediate future a greater burden on the state in dealing with this terrible menace to the health of our people.

On behalf of the board of directors, I desire to express to the superintendent and his staff our thanks for and appreciation of the splendid and loyal manner in which they have performed their respective duties. The state is under obligation to them, and such loyalty and devotion to duty should not go unappreciated.

The members of the board have closely coöperated with each other in the full discharge of their responsibilities and I desire to express to them my profound thanks for their interest in and attention to the work in which we are all engaged.

Respectfully submitted,
L. Lee Gravely,
Chairman, Board of Directors.

REPORT OF SUPERINTENDENT

The Board of Directors of the N. C. Sanatoria, Mr. L. L. Gravely, Chairman.

Gentlemen:

Herewith please find reports of the North Carolina Sanatorium and of the Western North Carolina Sanatorium for the biennium closing June 30, 1942, and of the expenditures to this date for the Eastern North Carolina Sanatorium. Full statistical data will be found in the body of the report. The report for the Western North Carolina Sanatorium was compiled by Dr. S. M. Bittinger, the capable medical director and associate superintendent.

Progress of Tuberculosis Control

There has been a slight further reduction in the tuberculosis death rate. In 1939 the tuberculosis mortality rate for this state was 51 and in 1941 it was 49. In England and in other countries at war there has been already a considerable rise in the incidence and mortality from tuberculosis. We will need to redouble our efforts to prevent a rise here at home.

That expenditures for tuberculosis control yield abundant returns financially as well as in human values can be seen by comparing the 156.4 tuberculosis mortality rate for 1915 with the 49 per 100,000 rate for 1941. It is conservatively estimated that each death from tuberculosis costs the state in medical and nursing care, in loss of wages, et cetera, at least \$3,000. In 1941, instead of the 5,586 deaths from tuberculosis which would have occurred had the 1915 rate obtained, there were only 1,769 deaths. By the above estimates this saving of 3,817 lives means an annual financial return to the state of \$11,451,000 on the comparatively small amount which is being invested annually for tuberculosis control.

The Eastern North Carolina Sanatorium

The building of the Eastern North Carolina Sanatorium has been by far the most important advance in the tuberculosis control program during the biennium. Since it was found that federal aid could not be obtained in sufficient amount to make available the funds appropriated for the building of the institution by the 1939 General Assembly, Senator T. W. M. Long

and Senator C. W. Spruill introduced a bill providing an appropriation of \$600,000 for the erection and the equipment of the Eastern Sanatorium. The bill passed without opposition.

The site committee appointed by Governor Hoey, consisting of Messrs. Odus Mull, Joe L. Blythe and L. L. Burgin, chose a beautiful site of 100 acres joining the city limits of Wilson, for which the patriotic citizens of this progressive city contributed \$20,000 in cash to the board of directors.

In spite of priority difficulties the four buildings, consisting of separate units for white and colored patients with 110 beds each, an administration and service building and a heating plant and laundry large enough for double the present capacity are practically complete. Most of the equipment has been delivered. The election of Dr. H. F. Easom as associate superintendent and medical director will insure the successful operation of the institution. The institution will be dedicated on September 23rd and we are fortunate to have Governor J. Melville Broughton as the main speaker for the occasion. It is hoped that the building will be ready to receive patients by the middle of October.

Additional County Sanatoria

During the biennium five other counties, Wilson, Anson, Alamance, Wayne and Martin, have opened sanatoria and the Wake County Sanatorium added 30 more beds. These total 64 beds for white and 80 for colored patients. There are now all together 23 counties which have their own sanatoria with a combined bed capacity of 417 for colored and 521 for white patients. Even including all beds for tuberculosis in private and public sanatoria the state is still 1,072 beds short of the two beds per death ratio recommended by the National Tuberculosis Association and the American Public Health Association.

Problems Due to the War Situation

Our institutions are all in defense areas and there has been such an increase in wages for all classes of workers that it has been very difficult for us to keep help. We have lost many of our employees who have been with us for years and we are having to operate our institutions largely with untrained employees. The greatly increased cost of living has made it impossible for us to operate within the budgets which were made out before the rise in prices. During the next biennium it will also be necessary for us to have materially increased appropriations.

Even with the additional beds provided at the Eastern North Carolina Sanatorium we feel that the capacity of our institutions will still be overtaxed. Approximately one per cent of the men examined for army and naval service are being rejected on account of tuberculosis and approximately one-half of those rejected have active disease and need treatment. Already 440 North Carolinians of those examined for military and naval service have been rejected on account of tuberculosis, many of whom are already under treatment in our state and county sanatoria.

The war situation has created such a shortage of doctors that we have lost three of our four clinicians and will lose the fourth in the near future. It has been impossible to find competent physicians to replace them. On this account we will be unable to conduct tuberculosis clinics in the various counties of the state during the emergency. Each of the institutions is conducting a daily diagnostic clinic. We are also encouraging physicians to have their doubtful cases x-rayed and to send their doubtful chest films to us for consultation if they so desire. We are already receiving several thousand of such films each year.

We are also urging the county health officers who have been furnished fluoroscopes by the State Board of Health to conduct regular tuberculosis clinics in their counties. Approximately 50 per cent of the health departments, probably representing 80 per cent of the population of the state, are now supplied with fluoroscopes. We have invited all the health officers who have fluoroscopic equipment and who are not already well-trained in chest fluoroscopy to come to the North Carolina Sanatorium in groups of four for periods of not less than two weeks for intensive study of fluoroscopy. Already several groups have come.

We have had so many staff changes that lack of space will prevent a detailed report. I especially want to mention two of our physicians, Dr. J. C. Burge of the Western North Carolina Sanatorium, and Dr. Wm. H. Roper of the North Carolina Sanatorium, who resigned to enter the medical corps of the Army. Dr. Burge is somewhere in the Philippines and Dr. Roper is located at Fort Bragg. Most of our staff members have had tuberculosis and are not eligible for war service. Several of

those, however, who have resigned have gone to take the places of other physicians who are entering service.

On February 3, 1941, our institutions and the anti-tuberculosis cause lost a most valuable friend in the death of Dr. T. W. M. Long. For thirteen years he was chairman of the board of directors of the North Carolina Sanatorium and for the past few years he was a most faithful and valuable member of the consolidated board.

Donations

We wish to express our deep appreciation to the many kind friends who have made generous donations of various kinds, a list of which will be found in the reports of each institution.

In conclusion I wish to express my deep appreciation to all of the members of the board for your helpful guidance and support and to Dr. S. M. Bittinger, medical director of the Western North Carolina Sanatorium, Dr. C. D. Thomas, associate medical director of the North Carolina Sanatorium, and to all of our other employees for their loyalty and valuable assistance.

Respectfully submitted,

P. P. McCain,

Superintendent, North Carolina Sanatoria and Director, Extension Department.

WESTERN NORTH CAROLINA SANATORIUM SUMMARY OF TWO YEARS' WORK

July 1, 1940-June 30, 1942

	1940-1941	1941-1942
Letters and postals received	9,419	9,450
Individual letters written	12,532	13,090
Articles copied (appromixate number of words)	10,800	8,500
Patients' histories written	254	283
Approximate number of words in patients' histories	436,500	500,600
Envelopes addressed	12,859	13,313
Enclosures sent out	940	867
Literature sent out	385	29t
Sputum cups distributed	18,100	16,300
Tuberculin sent to physicians	3,220	2,740
X-ray films sent in for interpretation	653	1,034
Operations:		
Report of phrenic operations	153	169
Report of pneumolyses	1	1
Report of thoracoplasties	85	77
Bronchoscopy	44	84
Other major operations	26	17
Minor operations	55	33
Blood transfusions	1	5

CLASSIFICATION OF NON-TUBERCULOUS CASES

1940-1942

Bronchial asthma, chronic pneumonitis, calcification of pleura
Bronchiectasis 14
Carious teeth and pyorrhea
Chronic abscess of lung and acquired cyst
Chronic bronchitis
Chronic non-tuberculous suppurative pneumonitis1
Chronic non-tuberculous suppuration with empyema
Chronic pneumonitis with marked calcification of pleura
Chronic tonsillitis
Congenital polycystic lung with chronic pulmonary fibrosis and
suppuration 1
Diseased tonsils and carious teeth
Hay fever1
Lung abscess
Oesophageal obstruction probably due to malignancy
Pneumonitis
Pulmonary carcinoma with metastasis to lymph node of chest wall.
Primary carcinoma of lung and pleura with metastasis to bones of
pelvis, spine, and upper right femur, also probably to liver
Vincent's infection of mouth and throat
